

ARTICULATED BOOM PULLER

Model CP9800

PRODUCT DESCRIPTION

OK Champion's newest project, expertly manufactured by Timberland Equipment, addresses the problem of winch rigging in difficult manhole situations. The CP9800 Articulated Boom Puller combines an underground pulling winch with an exclusive telescopic pulling frame to make manhole rigging a thing of the past.

With both devices mounted on an articulated boom, the pulling frame can be lowered into a manhole anywhere to the rear or side of the vehicle within a twenty-foot radius on the 20,000 lb. full size model. Unique hydraulic rotation resists side pull forces, and the articulated boom reaches in and out without needing to telescope.

The pulling frame is the proven design from the OK Champion Cable Scrapper. It is capable of supporting the cable sheave cantilevered from the top of the manhole without additional support. This saves time and aggravation normally encountered when rigging cable sheaves in restrictive, overcrowded manholes and extremely deep manholes.

See other side for equipment features and specifications.

ARTICULATED BOOM PULLER

Model CP9800

SPECIFICATIONS

20,000 lb. Hydraulic Underground Pulling Winch
Platform Body
Extendable crane mechanism
Hydraulic Pulling
180-degree rotation and 12' extension
20,000 lb. bare drum pull
Installed and tested

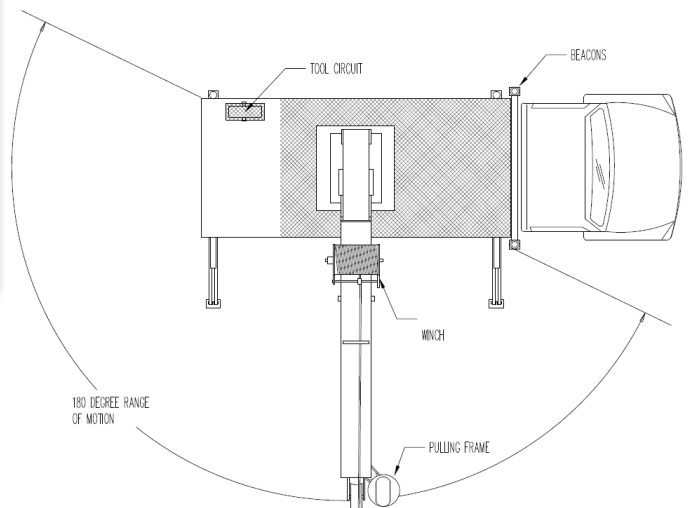

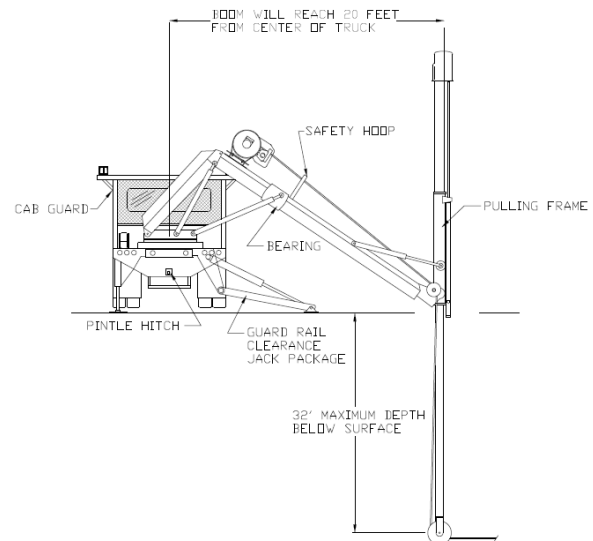

MINIMUM CHASSIS SPECIFICATIONS:

33,000 lb. GVWR
138" CA
Allison 3000 Series Automatic Transmission
250HP Diesel Engine
Vertical Exhaust
11R 22.5 Tires

EXCLUSIVE FEATURES

Set up winch pulling in different manholes hydraulically without manual set-up of sheave.
180-degree rotation and 12' extension to reach all manholes to side or in rear of vehicle.
20,000 lb. bare drum pull
Radio remote control allows operator to see operation while standing in the clear.
